Project Type: Entertainment App

Senpai Stream is an entertainment-focused app project designed to provide a simple way to discover and organize movies, TV series, anime, and other video content. The project focuses on creating a clean, user-friendly interface where users can browse available content without unnecessary complexity. Key areas of the project include content organization, search and navigation, responsive design, video playback, and an overall smooth user experience. The goal is to make entertainment discovery more convenient across different devices while keeping the interface easy to understand. The project can be explored further at senpai-stream app
